

multi-tenancy).

- **Authentication:** Firebase Auth (Email/Password & Organization-based Invites).
- **API Layer:** Netlify Functions (Node.js) acting as a secure gateway for 3rd-party tool integration.

---

### 3. Data Schema (Firebase Firestore)

Firestore will be structured to ensure strict data isolation between colleges.

#### organizations {collection}

- `orgId` {string}: Unique ID (e.g., "csn-nevada").
- `name` {string}: College Name.
- `apiKey` {string}: Hashed key for authorized API access.
- `settings` {map}: Domain restrictions, branding.

#### semesters {collection}

- `semesterId` {string}: (e.g., "fall-2026-fin101").
- `orgId` {string}: Reference to parent organization.
